

# BEAMFORM CORRUGATED FORMWORK

Beamform is disposable formwork for Ground Beams and Pile Caps. Polypropylene sheets provide contractors with a fast and effective means of forming ground beams and pile caps.

Sheets are light-weight and can be shaped by scoring and bending to form any ground beams on pile cap profile.

There is no need for release agents, formwork preparation or stripping which minimizes concrete wastage and results in significant labour cost savings.

# BEAMFORM CORRUGATED FORMWORK

## Product Description

Melting temperature	160°C
Softening point	152°C
Tensile strength (polymer)	27 MPa
ISO527-1-2	
Average compression strength	60 MPa /m2

## Advantages

Lightweight & easy to handle

Easily creased to form corners and joints.

Stores flat reducing storage space & transport costs
