

SPECIALISED FORMWORK

BESPOKE FORMWORK SOLUTIONS

In many construction projects formwork production on site is not possible either due to its highly complex design, lack of space or the requirement of special tools and machinery.

We are also able to offer bespoke, specialized formwork solutions which are prefabricated before use.

These prefabricated formwork parts are quick and easy to use on site and enables formwork to be produced in any scenario. Bespoke pieces of formwork can be cost effective due to the standard elements used (girders and walers for example) which can be re-used after the formwork is taken down.
