

TRENCH SHEETS GROUNDWORK SOLUTIONS

Trench sheets are used for construction work and temporary deployment.

Typical applications include small trenches and excavation sites, including basements, sewerage, water and gas works or other services. They are ideal for when services cross.

Formwork Direct Trench Sheets are available in lightweight, medium or heavy duty profiles and can be provided both overlapping and interlocking, ensuring a high strength to weight ratio which provides a safe environment for those working in any trench scenario

All sheet profiles can be used in conjunction with hydraulic support systems and a full range of handling and driving accessories are available.

TRENCH SHEETS GROUNDWORK SOLUTIONS

Product Detail	Information
Profiles	Standard Lap KD4 KD6 HY6 GFI (Corner Profiles available)
Width	330 400 600 520 500 cm
Thickness	3.4 6.0 8.0 6.0 6.0 cm
Depth	35 50 80 70 75 cm
Pan	110 150 125 125 230 cm
Weight (kg/m)	10.9 22.1 55.0 33.7 33.8 kg/m
Weight (kg/m ²)	32.9 55.2 83.3 64.8 67.6 kg/m ²
Bonding Capacity	8.5 19.0 45.0 63.2 62.0 kN m/m
Lengths Available	2-4 3-5 4-7 3-7 4-8 m

Advantages

Standard, medium and heavy duty profiles available.

Overlapping and interlocking profiles available.

HY6 and GFI rolled from high-yield steel for greater strength and durability.
